

Alex, would you mind introducing yourself, please?

My name is Alexander Döring and I am 32 years old.

What do you do at vision-tec and how long have you been on board?

I have now been working at vision-tec for 8 years. I started in the electrical workshop, then worked in service for 5 years and have been Deputy Production Manager for about 2 years. Additionally, I manage the organisation of the electrical department together with my colleague Michael Paternoga.

Why did you decide to embark on this career path at vision-tec?

Since the job interview was already pretty funny, I knew that this was exactly the right company for me.

What do you like best about your job?

What I like most about my job is that I can participate in the development of new machines as well as the continuous development and optimisation of our products. In addition to the interesting and various tasks, I appreciate the familiar working atmosphere and the nice colleagues.

What kinds of skills do you need for a job in your field?

You should have technical affinity and manual skills. You should also have a lot of fun working with PC-based systems. As there may also be on-site installations at the customer's location, you should have a certain willingness to travel.

What three words would you use to describe vision-tec?

Familiarly, exciting, and innovative.

Please complete the following sentences (and don't think about it too long):

→ When I'm not working, ...

... I spend time with my family and do sports.

→ If I were an animal, I'd want to ...

... a wolf - because it always goes with the pack.

→ If I was stranded on a desert island, I would like to have the following three things:

1. a lighter
2. a machete
3. a mobile phone

→ I really need to ...

... There is nothing big that I have planned.

→ My motto in life:

Always think positive.
